What are the risks and what could I get in return?

Risk Indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets. The risk category is not guaranteed and may change over time.

This product has been classified as 3 out of 7, which is a medium-low risk class. This means that the risk of potential losses from future performance is medium-low. Poor market conditions could reduce the value of your investment.

Be aware of currency risk. If your currency used for investing is different from the Share Class currency, the final return will depend on the exchange rate between the two currencies on the date of trade. This risk is not taken into consideration in the indicator shown above.

Changes in market conditions or unpredictable events can amplify this product's risks. Other material risk besides those captured by the risk indicator is credit risk (a complete description of risks can be found in the Prospectus).

This product does not include any protection from future market performance so you could lose some or all of your investment.

What happens if Sparinvest SICAV is unable to pay out?

No investor compensation or guarantee scheme applies to an investment in the Fund. Any investment into the Fund could entail the loss of the entire investment.

The Fund's assets are safeguarded by the Depositary. However, in the event of the Depositary's insolvency, the Fund may suffer a financial loss. Since the Depositary is required by law to segregate its own assets from the assets of the Fund, this risk is however mitigated to a certain extent.
